

Health Care & Services

About Us

Healthcare related activities are becoming more and more important as society ages, medical treatment becomes more advanced and globalization accelerates delivery of superior quality software and show leadership in applying advanced technology.

Seanergy has been catering to the Health Services serving customers from across the globe for more than 4 years. Our insights position us to envision business outcomes for our clients. Our solutions revolutionize the way the physicians deliver services and the way faster and efficient Medical aid is provided to the patients.

We combine sophisticated technology to help our clients deliver effective healthcare across the full spectrum of Healthcare IT and Business Services in the Life Sciences, Provider and Payer space leveraging our exposure in Applications Services and Infrastructure.

Our global delivery model helps us deliver end-to-end Health Care offerings to our clients from India and various other locations around the world.

Seanergy leverages an optimal resource mix to provide solutions for our clients. With a good number of Healthcare IT experts, we have successfully formed global delivery blended teams that have worked with client teams to meet engagement objectives. Our teams comprise of resources having very good domain exposure, and are tech-savvy that helps us provide delivery excellence to our healthcare customers to meet their strategic and operational business needs.

Healthcare industry is faced with challenges like increased government regulations, e-business challenges, rising patient expectations & demand for lower healthcare costs. These challenges have pushed healthcare organizations like never before to innovate at "Internet speeds," which call for technology projects to be delivered in weeks or months, not years. Yet, no organization can afford to sacrifice routine application maintenance and application enhancement in order to accelerate the rollout of new systems

Seanergy helps healthcare organizations to manage these challenges by offering expert custom software application development and application management services in the areas of healthcare like pharmaceutical, medical and life sciences.

Seanergy over the years has worked on number of projects that are related to healthcare industry. This experience has helped Seanergy to develop extensive healthcare business domain knowledge and provide the niche services targeting specifically for this vertical.

AmericaRx: Pharmaceutical E-commerce Website Development

AmericaRx provides a facility for buying drugs Online. Seanergy identified their business process and re-engineered their Selling and Shipping Methodology which had lot of manual components causing inefficient customer service.

Search Mechanism is one of the best features provided by Seanergy for AmericaRx Customers. A customer can search by Brand and Category wise products. Seanergy has developed Dictionary based search. This will allow the customers to search production with Synonyms and business words. SEO (search engine optimization) is one of the most significant achievements made by generating the HTML pages for each and Every Product, Brand and Category.

Over a course of a year Seanergy has successfully implemented the Pricing Mechanism, Shipment processing, Search, Payment gateway integrations with PayPal and Google, and simplified many painstaking processes thereby reducing the customer support costs.

Technology: Seanergy has built a clean .NET platform. The storage of business and transactional data is based on a SQL Server 2005 Database cluster.

The application server farm handles the public facing shopping cart engine and the order processing. Developed Web Services to interact with various third party vendors. Implemented Pixel Tracking mechanisms to record the number of successful orders from customers who are being referred from other sites.

“Seanergy was a pleasure to work with. They took our portal idea and the features we were looking at and turned it into a fully functioning eCommerce solution in a very reasonable timeframe. I am delighted with the results of the first version of the AmericaRX website, which is driving business forwards. I look forward to work with Seanergy on ongoing maintenance and future enhancements.”

Vasu

Revival: Healthcare Website development

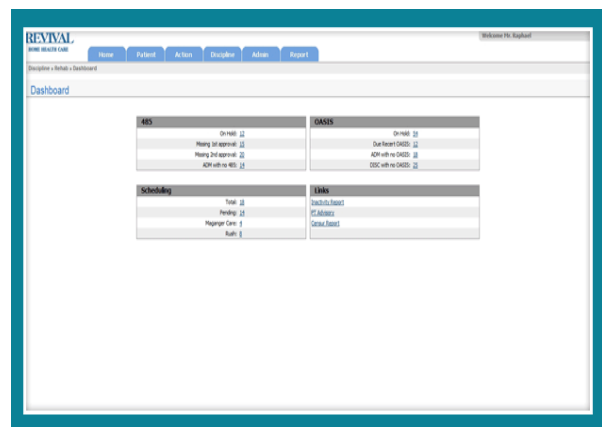

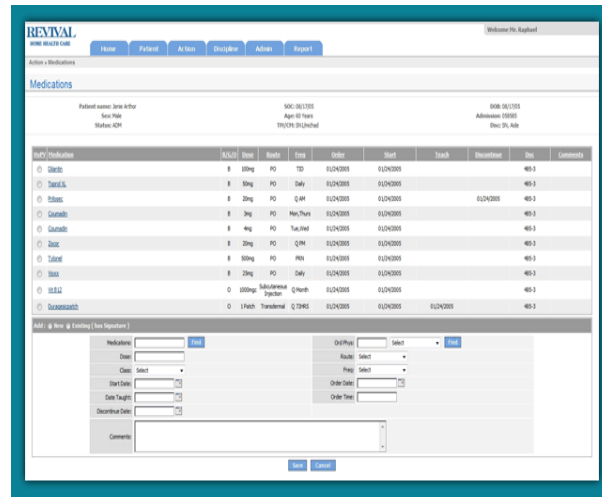

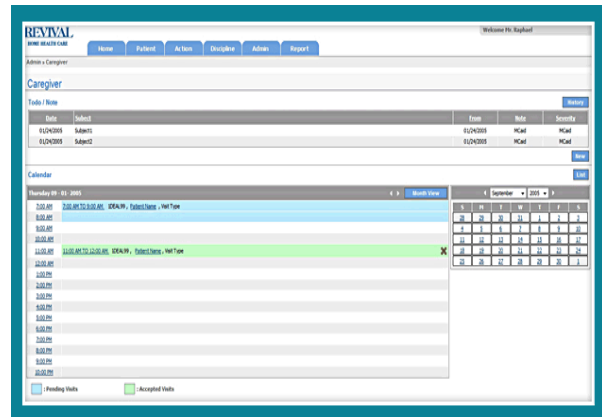

Revival Healthcare Information Systems offers you a unified view into internal financial and patient information systems, and streamlines processes and information-sharing across the organization. The resulting insight and efficiency improves patient care, enhances the ability to meet new regulations — and provides visibility into the levers that impact the organization’s financial well being.

Revival NetSolutions is an ideal solution for long-term care providers looking for a seamless way to create and manage electronic health records. This novel solution encompasses integrated clinical and billing applications that are critical for streamlining operations and transitioning to an electronic medical record.

Features:

- Auto generation of Interim orders.
- Integration with existing systems and external systems.
- Facility for Bar Coding and Scanning the Forms.
- System / User generated notes.
- Bi-weekly reports.
- Alert Managed care department if a patient insurance is changed to Managed Care.
- Facility to connect to Medicare and Medicaid systems and extract the necessary information for verification purposes.
- User Management Facility.

Technology: Seanergy has built a clean .NET platform for developing application. The storage of business and transactional data is based on a SQL Server 2005 Database.

The Scheduling office™ - Health Care Scheduling

The Scheduling office™ system is an access management and surgery scheduling solution designed to maximize resource utilization, improve throughput, optimize capacity management, and increase patient, staff and physician satisfaction. The Scheduling Office is the foundation to support revenue cycle and clinical care processes across the enterprise.

The Scheduling Office supports enterprise-wide and departmental performance improvement by offering:

The Scheduling Office helps us to connect procedure scheduling and operating suite activity to areas of the organization that have an impact on efficiency and finances, like supply management and patient accounting.

The application helps us to optimize operating room capacity management and throughput, control resource utilization, lower supply costs, and maximize revenue — all of which improve clinical and financial performance.

Features:

- Presents a visual appointment book for a graphical, easy-to-review display of scheduled and overlapped appointments and resources, improving access management.
- Automates the process of scheduling and sequencing multiple events for a particular patient / Doctor / Nurse within a single- or multiple-site facility.
- Searches for conflict-free options on all resources required for an appointment.
- Allows scheduling of multiple procedures or appointments at one time and automates the scheduling of repeated events.
- Improves the processes
- Optimizes the resources

Technology: Seanergy has built a clean .NET platform for developing application. The storage of business and transactional data is based on a SQL Server 2005 Database cluster.

Seanergy strived to understand our software solution and worked with us to develop a stable and robust application efficiently. They listened to our needs and their deliverables met every element of our required documents.

Seanergy exceeded our expectations and we will use them in other applications which we are planning to develop.

Michael Lauzon
Managing Director, GM3 Solutions
